

BSS 1000

DUAL DUROMETER TRACK SYSTEM

At every practice, in every race, your athletes give you their all.

They deserve a track system that allows them to push their performance to the limit - the BSS 1000.

Designed by our experienced team of chemists and engineers, the BSS 1000 is **the optimal surface for training and competing**. Its bio-engineered force reduction layer integrates very fine SBR rubber with environmentally friendly polyurethane to create an impermeable shock-absorbing cushion. Your choice of embedded, encapsulated or Hobart textured EPDM granules are mixed throughout the top wear layer giving your athletes total control.

IAAF certified at 13mm and also available at 10mm the BSS 1000 is guaranteed by an industry leading warranty. The BSS 1000 can be found in numerous NCAA Universities and is durable enough to **resist the roughest of weather** while providing a **top-level competition and training** surface with relatively little maintenance.

Your choice of embedded, encapsulated or Hobart textured EPDM Granules are mixed throughout the top wear surface to ensure traction over the life of your system.

Sharp, precise markings and a monolithic surface make this system ideal for world-class competitions.

The 8mm and 5mm force reduction layer provides the resilience and shock absorption necessary to meet the rigorous demands of IAAF performance specifications.

**TRAIN EASY.
RUN FAST.**
